## Experience

### Trainee at Flutter Development

Gaza Sky Geeks Company • Nablus
09/2022 - 12/2022

- I gained a lot of experience from this training, where I learned a new programming language, which is the flutter, from a professional trainer who has more than 10 years of experience in this field, and I developed many projects on the various topics that were covered during the training.

### Software Engineer

Arab Center For Information Technology • Tulkarm
02/2021 - 03/2022

- Designed and implemented a software applications for students and gived programming lessons in various parogramming languages.

## Projects

Project 1 (Jewelry Ecommerce App):

Jewelry ecommerce app that displays to the user a group of women's jewelry , where the user can add any product to the basket, and then the product will appear on the purchases page

I used API calling for the Jewelry information, and screen utill package to make the app reasonable on different screen sizes.

Project 2:

Resume Maker App: application the enables the user to inter his information then the app will generate a PDF CV for the user

I used API calling , sqlflite to store the user information, provider , image picker and navigation.

Project 3:

Food Delivery App:

Manager and customer can use this application for bowsing the categories and the meals of each category and add to the cart any meal he wants to order.

In addition to that, the Admin and can add new category/product/slider and update any of them and delete any of them .

I used Firebase to store the data, and for the authentication, image picker and provider

Note: All the projects are available on my GitHub link attached with pictures
